Lowering household bills

AI can help you lower household utility bills, understand discounted tariffs, and compare deals safely by breaking down terms and prices in plain English.

Use the following prompts to get suggestions on finding cheaper deals and reducing costs:

- How can I lower my electricity and gas bills?
- How can I save money on my broadband?
- How do I switch utility providers online?
- Help me find cheaper household deals.
- Is this energy comparison website safe?

The results might be what you need, but they won't be personal to your household budget or specific circumstances.

You can add more detail to the prompt to improve the result. For example, any benefits your household receives (like Universal Credit), your rough monthly spend, the size of your home. You could also include any specific concerns, like exit fees or mid-contract price rises.

Never share sensitive personal information like your bank account details, full address, or account passwords.

Try using the following prompts and compare the results to the previous ones.

- Are there any cheaper deals for gas and electricity for people on Universal Credit?
- What hidden costs, setup fees, or contract terms should a family on a tight budget look out for when comparing broadband deals online?
- How can I check if a cheap broadband or energy deal I saw advertised online is safe before clicking on it?
- Write a quick, step-by-step checklist to follow when switching home broadband providers online.
- Write a short list of questions I can ask my energy provider to find out if I am on their cheapest rate.

Try making changes to the prompts and see how they affect the suggestions.
